ABSTRACT:

PROBLEM TO BE SOLVED: To provide a similar document retrieving device which efficiently
retrieves document that is similar to a retrieval key document even when there are many
documents.SOLUTION: This device inputs a retrieval key document from an input device 2,
extracts document remarked context information that suggests the contents from each document
in an external storage device 4 and the retrieval key document, extracts category remarked
context information with a document group of different contents in the device 4 all together and
calculates category similarity between the document remarked context information and the
category remarked context information that is extracted from the document group of different
contents in a lump. It selects a document group that calculates document similarity with the
retrieval key document from a document database in accordance with the calculated category
similarity and outputs identification information of a document that is retrieved based on each
document similarity which is calculated by the document similarity calculating means as a retrieval
result to a display device 3.
